

DATA-DRIVEN DECISION-MAKING AND POPULATION HEALTH SUPPORT

Does your organization need information on available community resources? Are you in need of accurate aggregated, centralized data to support the development of programs? Care Compass Network can help! CCN's timely, local data is positioned to empower organizations to make data-informed decisions that impact community health and bolster grant applications.

Population Health Dashboards

Community Health Dashboard (SpectraMedix) is a central hub for local and state health data including Care Compass Network's qualitative research. This tool is designed to: Support strategic decisions to impact community health; Bolster grant applications; Filter data by time, variables, and county/ region to narrow scope; and integrate data with the Social Determinants of Health Dashboard to create strategic outreach plans to service targeted populations.

Use Case Example: When applying for a federal grant opportunity, the grantor would like your application to demonstrate local need. Instead of scouring the internet and emailing numerous colleagues to identify data sets that meet this criterion, use the **Community Health Dashboard** to skim available datasets and compile supportive resources that make your application comprehensive and compelling.

Social Determinants of Health (SDOH) Dashboard (SpectraMedix) tracks indicators of SDOH over time. Compare counties, census tracts, and zip codes across multiple areas of SDOH status to find geographic risk clusters.

Use Case Example: Your organization is updating its strategic plan. Your organization addresses several SDOH through various programs and you are looking to set SMART goals that demonstrate a tangible impact in the community. Using the **SDOH Dashboard**, you find a set of indicators that reflect the kinds of changes you are looking to make. These serve as a benchmark for you to improve outcomes for your clients compared to the average local outcome in the absence of your intervention.

DATA-DRIVEN DECISION-MAKING AND POPULATION HEALTH SUPPORT

The **SDOH Infrastructure Explorer (SpectraMedix)** is a comprehensive list, updated on an annual basis, of organizations in the region that provide services and education. Utilize this tool to: Connect and navigate clients to resources (clinical and non-clinical) in the community; and Identify organizations by geographic region and service category to easily match resources to client needs.

Use Case Example: Your organization utilizes community navigators to connect clients to other services your organization does not provide directly because you have a general understanding of SDOH, their interconnectedness, and the need to address the needs of a whole person. The SDOH infrastructure explorer ensures that your community navigators have a standard resource set rather than relying solely on implicit knowledge of community organization resources. This has improved your onboarding experience and made your organization's services more reliable instead of varying from staff person to person depending on who is hired and who is available for work that day.
